## About DevOps Master Program Pathway

### Lesson 1 - Devops Master Course

With the help of Dursikshya DevOps Master Training Course, you may be ready for a job in DevOps, a rapidly expanding industry that connects software developers and operations specialists. Learn the DevOps strategies and tools to succeed in your next DevOps practitioner position.

### Lesson 2 - Operating System Using Terraform And Ansible

One of the key steps in the DevOps workflow is configuration management. An in-depth explanation of the ideas behind Chef, Puppet, and Ansible is provided via this DevOps training course. A set of engineering best practices are known as the “DevOps lifecycle” offers a methodical approach to managing all the entities necessary for effective deployment.

### Lesson 3 - Learning For Docker Certified Associate Certification

The Docker Certified Associate (DCA) test and this practical Docker certification training course are matched. You will study fundamental Docker technologies including Docker Hub, Docker Compose, Docker Swarm, Docker file, Docker Containers, Docker Engine, Docker Images, Docker Network, Docker Daemon, and Docker Storage in this DevOps certification course.

### Lesson 4 - Git And Github Training

Learn the fundamentals of Git, a version control system (VCS), and how to set it up in your system, list the three stages of the Git workflow, build branches and track files, establish a repository in Git, GitHub, and more with this DevOps certification course.
